

Puzzle Generation

Now that we've developed an algorithm that generates satisfiable puzzles --Satisfiable in my verbiage meaning: solvable or having a solution that follows all rules given for a puzzle--there have been a few questions that have come to my mind that may require our attention. Viable meaning: having one unique solution. I believe this is the terms we have for common use.

Red Backgrounds represent un-answered questions

Green Backgrounds represent questions I believe are answered
